EAST EUROPEAN ECONOMIC DEVELOPMENTS: 1928-1954

Part II. Population and Physical Production

This report was prepared as part of the US contribution to a NATO study comparing economic trends in the Free World and in the Sino-Soviet Bloc. The other two parts of the study which relate to East Europe are: Part I, Gross National Product Analysis and Part III, Foreign Trade.

Prefatory Statement

Physical output was estimated partly on the basis of official reports by the Satellite governments and partly on the basis of reports from independent sources of varying reliability. In a number of cases--where two sets of estimates were available and they could not be reconciled within the time limit set for the completion of this report--alternative estimates are shown in footnotes.

In the case of East Germany, the alternative estimates--based largely on West German sources and involving prewar weights--were used in the summary tables III, IV, and V.

EAST EUROPEAN ECONOMIC DEVELOPMENT: 1928-1954  
Population and Physical Production

A. Population and Labor Force of the European Satellites, by Age Group and Sex.

European Satellite population will continue to grow, although slowly. In the near future the proportion of old people will increase, as will the proportion of children 14 years of age and under. The labor force itself will increase only slightly as a percentage of the total population. Within the labor force, however, a structural change which began earlier will continue, and a larger proportion of the labor force will be composed of nonagricultural workers.

\* n.a. = not available.

Of a total 93 million persons almost 30 percent were in Poland and nearly 20 percent in East Germany. The other five Satellites accounted for slightly over 50 percent of the total Satellite population.

It is estimated that should present trends continue the European Satellites will reach their prewar population level sometime between 1956 and 1960. The relative distribution between the Satellites will remain unchanged, it is believed.

The Satellites have a common pattern of population development. It is primarily a pattern in which the young and old groups of the population will increase while the middle age group will increase much more slowly.

~~S-E-C-R-E-T~~

~~SECRET~~

The labor force for all the Satellite countries was about 43 million persons in 1953, having increased by 2 percent over the previous year. A 4.3 percent increase is expected between 1953 and 1956, bringing the labor force total to almost 45 million. Increases in the labor force for individual Satellites range between 1.8 percent for Bulgaria to 6.3 percent for Czechoslovakia between 1953 and 1956.

**II. Civilian Labor Force of European Satellites, 1948-1954**  
(In 1,000 persons)

	<u>1948</u>	<u>1949</u>	<u>1950</u>	<u>1951</u>	<u>1952</u>	<u>1953</u>	<u>1954</u>
Albania	537	546	554	565	573	582	590
Bulgaria	3495	3512	3503	3479	3457	3459	3492
Czechoslovakia	5245	5290	5310	5401	5475	5575	5725
East Germany	6550	6725	7100	7325	7575	7675	7850
Hungary	3625	3785	3955	4075	4150	4250	4260
Poland	10900	11230	11895	12245	12745	13000	13260
Rumania	7300	7535	7865	8125	8275	8518	8543
Total	<u>37652</u>	<u>38623</u>	<u>40182</u>	<u>41215</u>	<u>42250</u>	<u>43059</u>	<u>43720</u>

Without exception, agricultural labor has been shifting to non-agricultural pursuits in the European Satellites since 1948. The indexes for agricultural labor show fairly constant declines; in Poland and Rumania the shifts from agriculture to nonagricultural pursuits have been slower and smaller in magnitude than elsewhere. On the other hand, indexes of accruals to the nonagricultural labor force since 1948 show much greater increases for each of the Satellites. Albania, Bulgaria, Poland, and Rumania continue to have a greater percentage of the total labor force in agriculture. Czechoslovakia, Hungary, and East Germany, on the other hand, have labor forces composed for the most part of nonagricultural workers. However, in the European Satellite area as a whole, progressive urbanization and industrialization will result in an upward long range trend in the ratio of nonagricultural to agricultural labor and a decline in agriculture's share in the gross national product.

**B. Agricultural Production in the European Satellites.**

In the case of no single Satellite has total agricultural production reached prewar levels according to indexes of total agricultural output using 1948 as the base year. However, production trends

~~SECRET~~

~~SECRET~~

since 1948 with the exception of Rumania and Hungary have been generally upward. It should be emphasized, however, that of the two major categories of crops, food and industrial, the latter have been produced in considerably greater quantities than was done before World War II. Except in Czechoslovakia and East Germany, indexes of the production of industrial crops show that they have increased more rapidly than food crops since 1948.

On balance, the livestock population situation in the European Satellites was almost as favorable in 1954 as in prewar years.

With the exception of Poland, there have been no large net accruals or significant expansion of arable land within the European Satellites area.

\*\*\*\* These alternative estimates are based on alternative indexes (1) and (2), respectively, in Table 18.

~~SECRET~~

~~SECRET~~C. Industrial Production.

The sub-division of the industrial sector of the Satellite countries into industry groups (sub-sectors) reveals clearly the system of priorities established under Communism. First priorities go to machinery and equipment. With the production of machinery and equipment as a primary goal, it follows that supporting priorities would go to chemicals, building materials metals and energy. Consequently, light and textile industries, food processing and forestry products are relatively neglected industry groups. The indexes of the production of industrial commodities show clear evidence of these trends.

\* Including depreciation.

\*\* Distribution of dollar values for all countries is based on 1950 weights, except for series (2) for East Germany which is based on 1938 weights.

\*\*\* Excluding Albania.

\*\*\*\* These alternative estimates are based on alternative indexes (1) and (2), respectively, in Table 25.

~~SECRET~~

~~SECRET~~

From 1948 to 1954, industrial indexes moved upward steadily and rapidly, averaging 20.2 percent for all Satellites per year. By 1954, Bulgaria had increased industrial production 110 percent; Czechoslovakia, 60 percent; East Germany, 142 percent; Hungary, 115 percent; Poland, 131 percent; and Rumania, 114 percent.

While in general these increases reflect a gain of over 60 percent from the peak of the prewar period (1938), examination of the industrial indexes (Tables 22 through 28) reveals clearly the emphasis placed on the build-up of heavy industry at the expense of development of light industry. This, in part, accounts for some of the impressive gains noted.

D. Transportation and Communication.

Between 1948 and 1954 the index for total freight turnover increased for all Satellites by approximately 128 percent, considerably exceeding, in all cases, prewar achievements in the field of freight handling. As a supporting index of the rate of growth of industrialization in the European Satellites, this achievement is significant.

Communications, on the other hand, did not show such large increases over 1948, although, except for East Germany and Poland, 1954 production indexes were much higher than prewar.

V. Net Value of Transportation and Communication\* in  
European Satellites, 1938-1954\*\*  
(In millions of 1951 US dollars)

	<u>1938</u>	<u>1948</u>	<u>1949</u>	<u>1950</u>	<u>1951</u>	<u>1952</u>	<u>1953</u>	<u>1954</u>
Bulgaria	27.9	41.2	45.7	50.1	54.6	59.0	63.4	67.9
Czechoslovakia	348.4	480.1	542.0	596.2	604.0	720.1	774.3	813.0
East Germany	940.0	540.0	670.0	690.0	800.0	880.0	1000.0	1060.0
Hungary	81.4	60.6	66.5	74.8	83.4	91.4	99.3	99.3
Poland	600.4	559.7	661.4	753.0	844.6	905.7	1017.6	1099.0
Rumania	131.3	112.2	118.6	135.5	182.1	190.5	211.7	224.4
Total	<u>2129.4</u>	<u>1793.8</u>	<u>2104.2</u>	<u>2299.6</u>	<u>2568.7</u>	<u>2846.7</u>	<u>3166.3</u>	<u>3363.6</u>

\* Including depreciation.

\*\* Excluding Albania.

As industry-related services, it may be expected that transportation and communication indexes will continue to rise along with indexes of industrial production.

## Footnotes to Table 17

- a. According to official Czech data -- Reports of State Statistical Office, Vol. 30, No. 1-3, 1949 -- the area of arable land amounted to 5.3 million hectares in 1948; on the basis of official admissions of a decline in the total arable area as figure of 5.1 million hectares is suggested as an alternative estimate.
- b. Official Czechoslovak statistics\* and annual progress reports in percentage terms suggest the following alternate estimates:

	<u>1948</u>	<u>1952</u>	<u>1953</u>	<u>1954</u>
Wheat	1,397	1,550	1,500	1,450
Rye	1,127	1,130	1,050	980
Corn	251	240	250	260
Potatoes	6,505	NA	NA	NA

- c. Alternate estimates based on Czech sources\*\* are: 1948-2,671,000 head of cattle and 3,446,000 hogs  
 1953-3,566,000 head of cattle and 3,790,000 hogs.
- d. See Part I, Table 7 footnote for indexes of total agricultural output.

Food Crops				176	100	115	144	135	128	139
Industrial Crops				130	100	115	139	121	116	145

- a. An official Polish source--The Plan Fulfillment Communique for 1949, published in *Wiadomosci Statystyczne No. 1, 1950*--gives output in 1949 as follows: wheat, 1.8 million metric tons and rye, 6.8 million metric tons; The Plan Fulfillment Communique for 1950--*Wiadomosci Statystyczne No. 1, 1951*--gives production of wheat in 1950 as 101 percent of that in 1949, which would place it at 1.82 million metric tons.
- b. On the basis of the official Plan Fulfillment Communique cited in footnote a/ above, which stated that the increase in the number of cattle in 1949 amounted to 11 percent over that in 1948 and the increase in 1950 was 2 percent over that in 1949, and accepting the 1948 figure as given in the table above, the figure for 1950 is alternatively estimated at 6,508,000 head of cattle.

a. 1939

b. Source: Federal Republic Statistical Yearbook, 1954.  
c. Alternative US estimate.

- d. Two independently-derived sets of indexes of industrial production and of industrial sub-sectors of production are listed for East Germany. The variations may be accounted for by the use of Prewar weights (B(2)) in one case and the use of postwar weights (B(1)) in the other, by differing classifications of production categories, and by differences in basic production estimates. It may be noted that the prewar relationship to 1954 is similar in both cases but that the dip in the immediate post-war period is much deeper in (B(1)) than is the case of (B(2)).
- e. 1938 = 100. The selection of a base year other than 1948 was necessary since data indicated that there was no defense production in 1948 or 1949.

a. On the basis of the Hungarian plan Fulfillment Report for that year, electric power production in 1954 can be estimated at 4.8 billion Kwh.

b. Based on known difficulties in the heavy manufacturing industries in 1954 and the official Hungarian admission that output of heavy industry declined by more than 3 percent, production of these machinery items in 1954 is alternatively estimated at about the same level as in 1953, or even somewhat lower.

c. Annual average for the interwar period.

Light and Textile	148	100	168	213	248	277	323	368

a. 1936

b. Based on the official Plan Fulfillment Communique for 1954 which reported output of crude oil and electric power at 107.5 and 109.2 percent of the 1953 production, respectively; 1954 output is alternatively estimated at 9,740,000 metric tons of crude oil and 3.71 billion Kwh of electric power.

c. Based on the annual Plan Fulfillment Communique alternate estimates of crude steel output for the years 1949-54 are as follows (in million metric tons):

	<u>1949</u>	<u>1950</u>	<u>1951</u>	<u>1952</u>	<u>1953</u>	<u>1954</u>
	0.5	0.5	0.6	0.7	0.7	0.6

d. 1954 output of tractors is alternatively estimated at 4,800 units, on the basis of the Plan Fulfillment Communique which reported the production of tractors in that year as 103.7 percent of that in 1953.
